Data-Driven Publishing

Documoto Sets the Standard for Parts Catalogs!

Is the technical documentation you provide to aftermarket support and customers outdated as soon as it's published? Desktop publishing applications make it extremely difficult to incorporate real-time data and user interactivity.

Why stick with the last generation of technology when you can easily publish web-based content that is accessible, agile, and accurate?

Every user of Documoto Publishing Suite has reported at least a 30% reduction in the time and labor to create a new parts catalog. The average savings is over 50%, and updating parts takes publishers less than 10% of the time required by desktop-based processes.

Documoto puts all of your parts data in the world's most powerful and extensible database system, MySQL. Java-based code lets you customize data and work flows to optimize business processes. In fact, Documoto was created with the latest cloud technologies and capabilities to make sure it serves its users' needs for years to come.

If you're accustomed to the slow pace of desktop publishing, give our sales team a call and request a demo of the speed and efficiency gains you can easily reap with Documoto.

Documoto Helps Publishing Departments:

- Accelerate the creation of new parts book by over 50% vs. DTP

- Migrate or enter source data once and re-use many times, in many books

- Update part information once, and all catalogs with that part auto-update

- Publish content online or in print with no duplicated effort

Documoto Technical Highlights:

- MySQL database architecture is highly secure, stable and scalable

- Documoto's Professional Services team can migrate legacy content of nearly any format

- Part data exported directly from your system with automated conversion tools

- Web services or CSV files used to automate regular and repetitive processes

- APIs give tech-savvy clients the ability to fashion their own data exchanges

To see if Documoto is the right fit for your team, contact the sales team at 303-957-2822.

"It took 3 to 4 days to introduce a new product into the system and days or weeks to update a part of model information. Both of those tasks now take just a few minutes using Documoto."
